

ManageEngine ADAudit Plus Product Features and Highlights

Do you have any of the below qns...

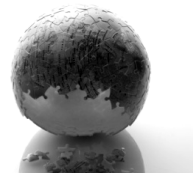

Enough of Management tasks that are delegated – How do I audit which users has done what action in Active Directory when and from where.

Innumerable number of resources. How can I identify logon activities on critical resources like the domain controllers, member servers in the last year?

I have a need to Audit all actions done in the Active Directory. My auditors want us show reports that are compliance ready?

Can I configure filters and determine administrator change actions in a given OU in a domain?

More questions than answers on Active Directory changes and find it difficult with native tools?

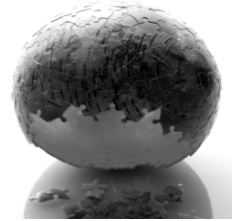

**ManageEngine ADAudit Plus – The right solution for
you.**

ManageEngine ADAudit Plus

ManageEngine ADAudit Plus is a Web Based Active Directory Change Auditing and Reporting solution.

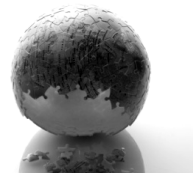

It help IT Administrators to audit and track all changes in Windows Active Directory.

Active Directory changes on Users, Computers, Groups, GPOs, Ous, Domain Policies and logon activities are audited and reported from a central web console.

What Problems that ADAudit Plus solve?

- # Tracks user logon activity from a central web console.
- # Monitors Domain Administrator activities and reports them.
- # Uses filters to help construct reports that can be used in Security and Compliance audits.
- # Provides a list of pre-configured reports on Active Directory changes and also reports on the history of changes done on AD user / computer objects.
- # Emails scheduled reports at desired time intervals.
- # Alerts about critical Active Directory changes via email.

What benefits does ADAudit Plus provide?

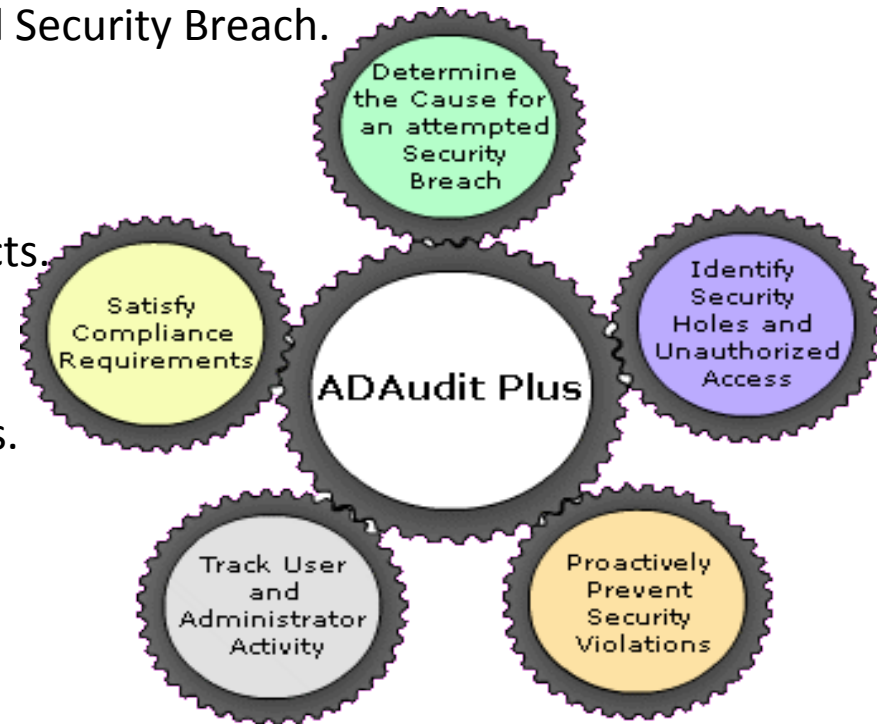

Helps Determine the Cause for an attempted Security Breach.

Identifies Security Holes and Unauthorized Access on User Accounts and other AD Objects.

Pro-actively helps prevent Security Violations.

Assists in a speedy remediation.

Satisfies the demands for Audit and Regulatory Compliance Requirements like SOX, HIPAA, GLBA etc.,

Who will be interested in this product?

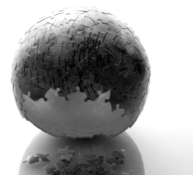

IT Auditors – Desire that they ready to use compliance reports for SOX, HIPAA, GLBA etc.,

IT Administrators – To understand if every change runs smooth and would like to have proactive notification via. alerts.

Security Administrators – Identify breaches from historical data – nail the culprit(if any) and the corresponding user actions over a period of time.
e.g.: Security Group deletion, Domain controller logons etc.

IT Managers – Want to have information on periodical changes in the Active Directory – like user objects created, deleted or modified. They can schedule reports on change events and get it delivered to their email.

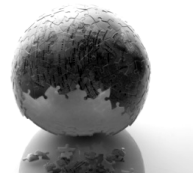

Can view reports on logon actions, peak logon hours and other management actions done. This helps them to plan resources accordingly.

Selling Points to attract Businesses?

- SOX, HIPAA, GLBA and other compliance reports are demanded by regulatory bodies of several countries. ADAudit Plus reports help address most of them.
- Security threats are playing a major role in influencing business purchase decision. ADAudit Plus can always be considered as a security product.
- Native tools provide no real ability for the administrator to audit changes made to Active Directory, other than to manually search through what would be countless numbers of event log entries for a single entry.

The above requirements make the need for a product like ADAudit Plus indispensable.

Competition and ADAudit Plus

The demand for an auditing requirement has forced several solution providers to include change audit solution to their portfolio.

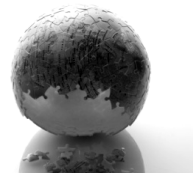

Some of our competitors include

- **NetVision – Audit for AD.**
- **Quest – InTrust for Active Directory.**
- **NetPro – Change Auditor for Active Directory.**
- **StealthAUDIT for Active Directory.**
- **NetIQ – Change Guardian for Active Directory.**
- **BlueLance – LT Auditor for Active Directory.**
- **Netwrix – Active Directory change reporter.**
- **Scriptlogic – Active Administrator.**
- **CionSystem – Active Directory Change Notifier.**

Unique Selling Points of ADAudit Plus

- Comprehensive Auditing Solution – captures and stores every single event (or) activity that occurs in Active Directory and reports them on demand.
- Allows filtering out specific events / activity that needs to be (or) need not be reported / alerted for desired Active Directory objects
- Graphs, reports and alerts on a convenient web interface that can be easily interpreted.
- Real Time Alerts and Email Notifications on change events.

What differentiates ADAudit Plus from its Competition?

- Domain Controllers based licensing versus a user based licensing of others.
- Ease of installation with a learning curve that is almost nil.
- Capable of collecting audit data and reporting within few minutes of installation.
- ADAudit Plus is web based whereas the other software are client based.
- Logon status reports come as a part of the standard product which the competition either have it as a separate product or charge as an add-on.
- Provides separate logins for administrator who does configurations and sets filters for reports extraction and a guest login who will only be able to view reports.
- The product is comprehensive covering users, computers, groups, GPOs, OU's, Logon and Domain policy changes on a single web console.

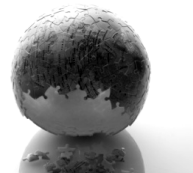

What is cooking here...

- Logoff Reports

- Comprehensive auditing changes to Group Policy Objects.

- Support for Windows Server 2008

- Auditing user access – File server audit
